

Diskus® 24RK

Art. no. 12788

Page 1 of 1

Technology

- Original Diskus® design: 360° protection
- Shackle made of hardened steel
- Diskus® Deep-Welding Technology for maximum strength
- Anti-cut plate
- Precision pin tumbler
- Cylinder can be taken out and rekeyed to match an existing key
- Available with RH 5-pin cylinder or Master M1 4-pin cylinder
- Made in Germany

Operation and use

- The ABUS Diskus® lock is a special kind of padlock with some distinct advantages. The disk shape itself effectively combats the most common ways of forcing it open. The design with only a small opening in the shackle makes it very difficult to tamper with. As these disk locks are mainly made of stainless steel, they are used especially where both security and protection against corrosion are required. The 24RK is used to secure doors, gates, cabinets, cellars, sheds, etc. The Diskus® 24RK is also a service lock which means that the cylinder can be taken out and be rekeyed to match an already existing key.
