- One unused RS-232 Serial Communications port (Com 1-4), or USB Port (see NOTE 1).

OPERATION

For details regarding the use of the AL-PCI2, refer to DL-Windows User Guide OI237.

NOTE 1:

The AL-PCI2 is fully RS-232 compliant and will function properly with a computer that has an RS-232 compliant serial Com Port. However, many new notebook computers do not provide the proper RS-232 compatible Com Port voltage levels required by the AL-PCI2. In these cases, the AL-PCI2 may not function properly.

To test a serial Com Port for AL-PCI2 compatibility, attach the AL-PCI2 to the Com Port and run the DL-Windows loop-back test. If the loop-back test fails, the Com Port is most likely not RS-232 compliant.

For new computers with non-RS232 compliant Com Ports, it is recommended that the AL-PCI2 be connected to the computer's USB port. Obtain a USB converter (MX1130) from Alarm Lock Systems. The MX1130 has been fully tested by Alarm Lock for use with the AL-PCI2.

CONNECTION

Refer to the following wiring diagrams / applications:

Application 1 Program the Lock directly using a PC or Laptop

Application 2 Send Trilogy Lock Programs from PC to AL-DTM for transfer to multiple Digital Locks OR use the AL-DTM to retrieve system activity reports from locks to be transferred to the PC.

Application 3 Connect the AL-PRE Prox Card Enroller to the PC to read Prox Cards directly into DL-Windows.

NOTE 2:

The AL-PCI2 is designed to be used on a 9 pin serial Com Port. If your computer has a 25 pin Com Port, a 25 pin to 9 pin adapter must be used. **Warning:** Polarity MUST be observed when connecting to the lock. The tab (-) must plug into the left hole (black).
